Potential

Rating

Properties can be rented if they have an energy rating from A to E. If the property is rated F or G, it cannot be let, unless an exemption has been

Rules on letting this property

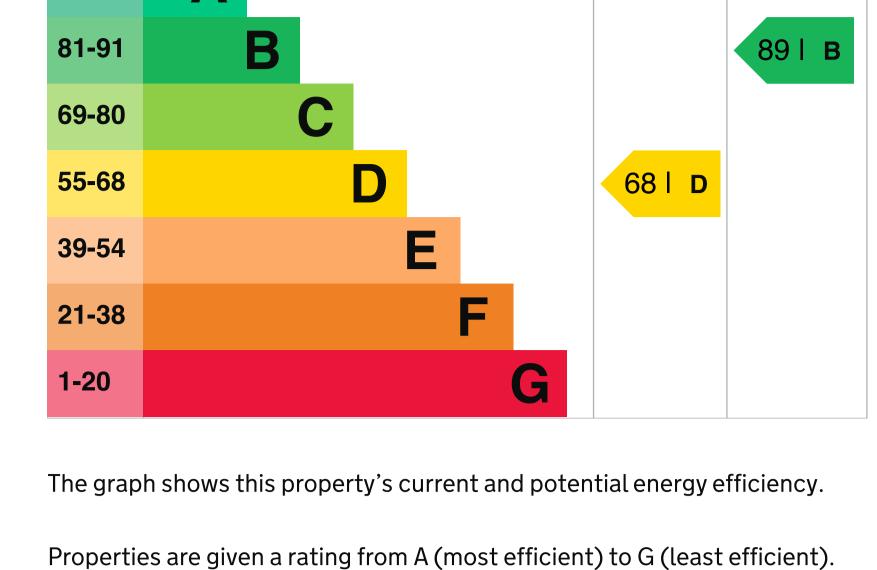

registered. You can read guidance for landlords on the regulations and

exemptions.

This property's current energy rating is D. It has the potential to be B. See how to improve this property's energy performance.

Energy efficiency rating for this

Score Energy rating Current 92+

Properties are also given a score. The higher the number the lower your fuel

bills are likely to be.

For properties in England and Wales: • the average energy rating is D • the average energy score is 60

performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Breakdown of property's energy

Each feature is assessed as one of the following: very good (most efficient) good

average poor

- very poor (least efficient) When the description says "assumed", it means that the feature could not be
- inspected and an assumption has been made based on the property's age and type.
- **Feature Description**

Cavity wall, as built, insulated (assumed) Wall Good Pitched, insulated (assumed) Good Roof

Window	Fully double glazed	Average
Main heating	Boiler and radiators, mains gas	Good
Main heating control	Programmer and room thermostat	Average
Hot water	From main system	Good
Lighting	Low energy lighting in all fixed outlets	Very good
Floor	Suspended, no insulation (assumed)	N/A
Secondary heating	None	N/A
Primary energy u	se	
The primary energy us square metre (kWh/m	e for this property per year is 258 kilowatt 2).	hours per

► What is primary energy use?

Environmental impact of this property This property's current environmental impact rating is D. It has the potential

to be B. Properties are rated in a scale from A to G based on how much carbon dioxide

(CO2) they produce.

This property produces

the people living at the property.

this property's energy efficiency.

Typical installation cost

Properties with an A rating produce less CO2 than G rated properties.

An average household 6 tonnes of CO2 produces

2.6 tonnes of CO2

Potential energy

rating

£800 - £1,200

£2,200 - £3,000

£4,000 - £6,000

£3,500 - £5,500

£20

69 | C

This property's potential 0.8 tonnes of CO2 production By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 1.8 tonnes per year. This will help to protect the environment. Environmental impact ratings are based on assumptions about average

occupancy and energy use. They may not reflect how energy is consumed by

How to improve this property's energy performance Making any of the recommended changes will improve

improve the property's energy rating and score from D (68) to B (89). What is an energy rating?

Recommendation 1: Floor insulation (suspended floor) Floor insulation (suspended floor)

Add additional 80 mm jacket to hot water cylinder

If you make all of the recommended changes, this will

Typical yearly saving Potential rating after carrying out recommendation 1

Recommendation 2: Hot water cylinder insulation

Typical installation cost £15 - £30 **Typical yearly saving** £8 Potential rating after carrying out 70 | C recommendations 1 and 2

Recommendation 3: Replace boiler with new condensing

Typical yearly saving £88 Potential rating after carrying out 74 | C recommendations 1 to 3

Recommendation 4: Solar water heating

Potential rating after carrying out recommendations 1 to 5 Paying for energy improvements

Find energy grants and ways to save energy in your home.

Estimated energy use and potential savings £575 Estimated yearly energy cost for this property

The estimated cost shows how much the average household would spend in

The estimated saving is based on making all of the recommendations in <u>how</u>

For advice on how to reduce your energy bills visit Simple Energy Advice.

this property for heating, lighting and hot water. It is not based on how energy

Heating a property usually makes up the majority of energy costs. Estimated energy used to heat this property

Potential energy savings by installing insulation Type of insulation **Amount of energy saved Loft insulation** 207 kWh per year

You might be able to receive Renewable Heat Incentive payments. This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments.

accreditation scheme This EPC was created by a qualified energy assessor. If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

assessors are qualified to carry out EPC assessments.
